DETAILED ACTION
REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Claim 1 is allowable over the prior art of record because the teachings of the references taken as a whole do not show or render obvious the combination set forth, including: (1) a dynamic air classifier for separation of granular and powdery materials into fractions of different grain sizes comprising: a rotary cage adapted to create a vortex when subjected to air flow, the rotary cage classifying the materials into fine particles and coarse particles, a recovery chamber, the recovery chamber being defined by a casing, wherein the recovery chamber receives the fine particles mixed with air from the rotary cage; said recovery chamber coaxially arranged in a protrusion of the rotary cage, the recovery chamber using the vortex created by the rotary cage for cycloning the fine particles mixed with air and separating the fine particles from the air; and the recovery chamber including a fine particles outlet and an air outlet, wherein the fine particles separated from air exit through the fine particles outlet and dedusted air exits through an air outlet.

Claim 20 is allowable over the prior art of record because the teachings of the references taken as a whole do not show or render obvious the combination set forth, including: (1) a dynamic air classifier comprising: a material inlet receiving materials including coarse particles and fine particles; a rotary cage including a vortex creating

apparatus to generate a vortex, the rotary cage including a classifier classifying the coarse particles from the fine particles; a coarse particle outlet allowing collection from the rotary cage; a recovery chamber vertically arranged under the rotary cage, the recovery chamber receiving the classified fine particles mixed with air; wherein the recovery chamber includes at least one deflector and uses the vortex created by the rotary cage to cyclone and separate fine particles from air; wherein the recovery chamber includes a fine particle outlet and an air outlet, the fine particle outlet coaxially arranged with the air outlet, wherein the fine particle outlet circumscribes the outer periphery of the air outlet, wherein the fine particles separated from air is recovered through the fine particle outlet and a dedusted air exit through the air outlet.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
